Dear IFI,

I've been using the VEX Robotics System in my class for several years now, and I can't think of a better way to teach engineering concepts. What a great product! The VEX system allows students to implement complicated design principles in a short period of time. I find my students eager to learn about basic engineering principles and how to improve their designs. And I don't think there can be a more exciting way to teach computer programming. There is so much support out there for VEX between the curriculum and the forums the students learn how to research their problems and come up with solutions on their own. I've been teaching for 14 years and I've seen a lot of curriculum. I honestly believe the VEX Robotics System is the best way to deliver a fun and challenging robotics and engineering curriculum.

Sincerely,

Travis D. Lehman
Technology & Engineering Teacher
VEX Coach, Team 197
